📇 PERSONAL STATEMENT

A bit about me: I am keenly interested in programming, data and, more specifically, data visualisation. I like building, whether it be a tool for navigating data or building a website to show off some learnt skills. I enjoy that I can create something to make a task or experience better. I've also discovered that I work best in a team environment, where I can quickly share ideas and iteratively respond to feedback from other members much faster than if I were on my own.

🎓 EDUCATION
